Candidate Integrity Tracker August 2024

Integrity Insights

Across August 2024, we have data from **66,617** assessments.

For August 2024 relative to August 2023, we saw mean scores increase by **0.81%**, fully consistent with normal variations.

With **12 months** of data, across **1,660,699 assessment completions**, there continues to be no evidence of cheating or inflated scores due to generative AI.

Of Interest

Of particular interest, the pass rate for August 2024 relative to August 2023 has *declined* by -23.97%, showing a substantial decrease year over year.

This is the *opposite* of what we would expect if AI was being used by candidates to cheat on assessments.

Similarly, pass rates for August 2024 *declined* by -3.08% relative to the July 2024 pass rates.

If generative AI was having any impact on candidate behaviour and performance, we would expect to scores trending *up* consistently over time. This simply is *not* the case: instead, we see variations over time, with scores and pass rates sometimes up and sometimes down, but within the range of normal seasonal variations.

At Cappfinity, we are always guided by the data.

Cappfinity releases the Candidate Integrity Tracker each month, to track any overall industry indicators of candidate integrity. Cappfinity data scientists review our proprietary data sources to derive ongoing insights into candidate integrity and assessment-taking behaviour.
